

# Program Documentation

## Smart Naming for HotFolders Pol Navarro

With this innovation, users can easily define printing parameters such as:

**\_c[x]** → number of copies

**\_z[x]** → zoom level

**\_r[x]** → rotation

**\_m[nxm]** → mosaic layout

For example:

**Design\_c25.psd** → 25 copies

**Design\_z200.psd** → 200% scale

**Design\_m3x4.psd** → 3x4 mosaic

This proof of concept opens the door to a smarter, more flexible way of managing production workflows, making automation even easier and faster in neoStampa.
